# KetoMax 15%

Broad spectrum treatment of

**PAIN**

**FEVER**

**INFLAMMATION**

mastitis

Swollen mammary glands are painful.

Redness, heat and swelling associated with mastitis require anti-inflammatory and pain relief treatment with KetoMax.

By reducing swelling and pain, cows with mastitis will be less irritable during milking, return to grazing faster, and recover more rapidly.

dystocia

Difficult calvings can result in inflammation, swelling and pain. KetoMax should be given to cows following all calvings where any significant force has been used.

All cows with pinched nerves and cows 'down' after calving should always be treated with KetoMax.

By controlling the inflammation and providing pain relief, the cow will recover more rapidly and return to grazing faster.

# KetoMax 15%

lameness

Treat the pain and inflammation of lameness in your herd with high potency KetoMax.

Also prevent lame cows suffering more pain when you treat the source of the lameness. Give lame cows KetoMax before using a hoof knife to open hoof cracks, etc.

There are several reasons for 'down' cows. Identifying and treating the cause is important.

Sometimes the cause is nerve damage after a difficult calving with a large calf. In these cases KetoMax whilst the cow remains down is recommended.

Other times the cause is metabolic so correcting her metabolic state (e.g. via calcium/magnesium bags) and keeping her hydrated are essential. When a cow is down, she can suffer muscle damage so KetoMax may also be given.

If the cow has a temperature or infection KetoMax will reduce fever, swelling and pain.

down cow

SCOURS

Infectious scours (e.g. rotavirus, coronavirus, crypto, coccidiosis) cause severe cramping and pain. These infections also damage the gut lining.

Treating scours should firstly focus on rehydration using electrolytes. Treating scouring calves with KetoMax will also help the calf feel better, quicker. This means a fast return to feeding and rapid recovery.

KetoMax 15% is a non-steroidal anti-inflammatory injection. Restricted Veterinary Medicine No. A11031.

The dose rate is 1mL/50kg i.e. 10mL per 500kg cow and 1mL per 50kg calf.

Withholding periods  
Milk: Nil  
Meat: 2 days
