

FACT SHEET

MeloxiVet Injection

WHAT IS MELOXIVET?

Longer action non-steroidal anti-inflammatory for treating pain, fever and inflammation in cattle. Contains meloxicam 20mg/mL in solution for injection.

WHAT IS MELOXIVET FOR?

MeloxiVet is for the treatment of pain, inflammation, and fever in cattle.

A single dose of MeloxiVet lasts for days. The effects of meloxicam are attributed to its inhibition of the inflammatory process.

WHEN SHOULD YOU USE MELOXIVET?

MeloxiVet should be used when cows or calves are showing signs of pain, inflammation (heat, redness, swelling) and / or have a high temperature. It is often used in conjunction with other treatments such as antibiotics, metabolic treatments or electrolytes.

Conditions where MeloxiVet is useful include:

- mastitis
- mammary oedema (swollen udder)
- respiratory conditions
- colic
- calf scours
- calf disbudding
- difficult calvings
- musculoskeletal conditions such as lameness and 'pinched' nerves

HOW DO YOU USE MELOXIVET?

Administer by intravenous or subcutaneous injection, in the neck.

Dose for cattle: 2.5 mL / 100 kg liveweight.
eg 500kg cow dose is 12.5mL
or 40kg calf dose is 1mL

WITHHOLDING PERIOD

Milk: 84 hours

Meat: 10 days

STORAGE

Store below 25°C.

Discard unused content 28 days after opening.

PACK SIZES

Available in 100mL bottles.

RESTRICTED VETERINARY MEDICINE

ACVM Registration Number: A11242

MeloxiVet is also registered for horses and pigs.

Refer www.agrihealth.co.nz for details.
