

Co-Synch: New Zealand's superior synchrony program for heifers

Farmers synchronising heifers with the Co-Synch program have tighter calving patterns and superior reproductive performance and profitability.

Why synchronise heifers?

10 more days in milk 	12kg more milk solids 	10 more days to recover between calving & mating 	less wastage as 3 year old cows 	tighter calving spread simpler to manage 	more AB heifer calves faster genetic gain 
--	---	--	---	--	--

Superior performance

A New Zealand case study demonstrated that heifers synchronised with the Co-Synch program performed on par with industry targets, achieved a tight calving pattern and a higher 6 week in-calf rate.

	Calving pattern			Pregnancy rates		
	Calving start	3 weeks	6 weeks	3 week in-calf rate	6 week in-calf rate	Not in-calf rate
2017 heifers - Not synchronised	13%	68%	86%	27%	50%	26%
2018 heifers - (Co-Synch program)	54%	84%	98%	49%	75%	9%

Superior profitability

Heifers synchronised with the superior Co-Synch program will result in an extra \$60 profit per cow.
