

# FACT SHEET

## KetoMax 15%

### WHAT IS KETOMAX?

High potency non-steroidal anti-inflammatory for treating pain, fever and inflammation in cattle. Contains ketoprofen 150mg/mL in solution for intramuscular injection.

### WHAT IS KETOMAX FOR?

KetoMax is for the treatment of pain, inflammation and fever in cattle.

Ketoprofen is rapidly and extensively absorbed following injection, so has a rapid onset of action. The effects of ketoprofen are attributed to its inhibition of the inflammatory process.

### WHEN SHOULD YOU USE KETOMAX?

KetoMax should be used when cows or calves are showing signs of pain, inflammation (heat, redness, swelling) and / or have a high temperature. It is often used in conjunction with other treatments such as antibiotics, metabolic treatments or electrolytes.

Conditions where KetoMax is useful include:

- mastitis
- mammary oedema (swollen udder)
- respiratory conditions
- colic
- calf scours
- difficult calvings
- musculoskeletal conditions such as lameness and 'pinched' nerves

### HOW DO YOU USE KETOMAX?

Administer by intravenous or intramuscular injection, in the neck.

**Dose for cattle: 1 mL / 50 kg / day** for 1 to 3 days depending on the severity and duration of symptoms eg 500kg cow daily dose is 10mL.

### WITHHOLDING PERIOD

**Milk: Nil**

**Meat: 2 days**

### STORAGE

Store below 25°C.

Discard unused content 90 days after opening.

### PACK SIZES

Available in 100mL and 250mL multidose bottles.
