Evidence based vet medicines

AgriHealth

Once a day treatment options

Only 3 lactating cow intramammary mastitis treatments have a specific ACVM approved withholding period for once a day milking

Albiotic advantages

Broad spectrum action

- effective antibiotic combination against all major mastitis pathogens in NZ

Short milk withholding period

- less milk discarded
- reduced hassle with fewer cows in mastitis/antibiotic mob for shorter time

Versatile

- can be used when cows are being milked either once or twice a day
