

WHY MASTATEST?

Identify the bacteria causing the mastitis faster
Mastatest makes it possible to tailor treatment for every case of mastitis:

- identify the bacteria
- treat with the most appropriate antibiotic
- improve cure rates first time

Mastatest reduces the need to retreat cows

Optimum treatment of every cow

Best use of antibiotics

Improved cure rates

Fewer retreated cows

- Innovative technology developed in NZ
- Manufactured in NZ
- Distributed by local veterinary medicines firm AgriHealth
- Uses cloud technology to deliver results to your inbox within 24 hours

Sample every clinical mastitis case

Set and forget mastitis test

Take action against mastitis armed with all the information you could wish for

WHAT IS *Mastatest*

BENEFITS OF *Mastatest*

Mastatest is a mastitis test for milk samples

Mastatest

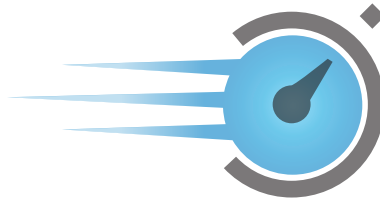

1. identifies whether or not there are bacteria present in the milk sample
2. identifies which bacteria are present
3. evaluates how sensitive these bacteria are to various antibiotics

Within 24 hours of starting the test, Mastatest reports the bacteria that were identified, and the preferred antibiotic to treat the mastitis infection in that cow's quarter.

FAST

results automatically arrive within 24 hours

SIMPLE TO USE

set and forget the test, no interpretation required

COMPREHENSIVE

reports bacteria type and antibiotic sensitivity

Mastitis milk samples are evaluated more quickly, comprehensively and conveniently than ever before

PROVEN

clinically validated in New Zealand on-farm mastitis test

ELECTRONIC RECORDS

results and recommendations automatically reported to farmer and vet

USE ON-FARM

samples collected and tested by farmers
